

Assignment 2 – Clarifications

1. “Item” references have been changed to “Term” references in description document
2. Typo in query lines has been fixed (file queries.txt). For example, a query line in file “queries.txt” is now: query: HP:1234567
3. “Terms” having an is_obsolete keyword should be skipped (216 items)
4. When reading the “Terms” in, the keyword values that absolutely need to be parsed and isolated are: id and is_a
5. The entire content of a “Term” can be captured in a single String attribute of an object of type Term
6. For “Terms” having two or more is_a keywords (3163 Terms), select just the first instance to identify a parent “Term”
